

AKSHAY GEDAM

Software Developer — Full Stack (MERN)

gedamakshay150@gmail.com | +91 9156073686 | linkedin.com/in/akshay-gedam | github.com/AkshayG079 | Nagpur, India

PROFESSIONAL SUMMARY

Full-stack developer specializing in the MERN stack, with hands-on experience building scalable APIs, microservices and real-time systems. Proven track record delivering secure, production-ready features across CRM/ERP and health-tech domains, with strong focus on performance optimization, debugging, Agile/SDLC practices and cross-functional collaboration.

TECHNICAL SKILLS

Frontend	React.js, Next.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, MUI
Backend	Node.js, Express.js, REST APIs, Socket.io, Server-Sent Events (SSE), JWT, OAuth, RBAC
Databases	MongoDB, PostgreSQL, MySQL, Redis
Infra & Tools	Docker, RabbitMQ, Git, GitHub, Vercel, Render, Postman
Architecture	Microservices, MVC, Design Patterns, Data Structures

WORK EXPERIENCE

Software Engineer | Cluematrix Technologies Pvt. Ltd Jun 2025 – Present

- Reduced API response latency by **35%**, measured by backend performance monitoring, by redesigning query logic and optimizing database indexing across MySQL and MongoDB services.
- Strengthened application security by eliminating a known unauthorized-access vulnerability class, measured through audit log review, by implementing JWT- and OAuth-based authentication with role-based access control (RBAC).
- Architected and sustained **100+ production-ready RESTful APIs**, streamlining core application workflows by implementing standardized response structures and robust exception handling mechanisms.
- Delivered **10+ production-ready features** on schedule, measured by sprint completion rate, by collaborating cross-functionally with frontend, backend and QA teams in an Agile/SDLC environment
- Scaled backend services to support **500+ concurrent users**, measured by load testing, by architecting microservices-based components following MVC and design pattern best practices.

PROJECTS

Sanvid — Business Automation Platform *Node.js, MySQL, SSE, Monolithic Architecture*

- Automated end-to-end project and payment workflows for a multi-level CRM/ERP system, cutting manual milestone tracking effort by **40%** through a custom workflow engine with automated notifications and audit logging.
- Implemented JWT authentication and RBAC-based access control, ensuring secure, role-specific data access across hierarchical project structures.
- Improved query performance by **25%** through structured data modeling and reduction of redundant API operations.

Saojiwala — Real-Time Food Delivery Platform *Microservices, RabbitMQ, Node.js, PostgreSQL*

- Enabled real-time order tracking across 3 user roles (customer, vendor, driver) by building an event-driven microservices architecture with RabbitMQ for asynchronous messaging.
- Reduced delivery ETA calculation errors by **20%** using dynamic, geospatial radius-based dispatching logic.
- Built driver earnings tracking and live logistics monitoring, improving end-to-end order visibility for all stakeholders.

TURO — Fitness Tracking & Recommendation App *React.js, Node.js, MongoDB, Redis, Cron Jobs*

- Improved API response time by **50%** using Redis caching for frequently accessed fitness data.
- Built a rule-based recommendation engine personalizing workout/meal plans for **50+** users, including a trainer-matching system based on user metrics and goals.
- Designed RESTful APIs and JWT-based RBAC authentication supporting mobile app and admin panel across users, trainers, and admins.

EDUCATION

B.Tech in Computer Engineering — Swaminarayan Siddhanta Institute of Technology, Nagpur

2024 – 2027 (Pursuing)

Diploma in Computer Technology — Government Polytechnic, Bramhapuri | 83.31%

2021 – 2024
